

Tenant Onboarding Module – Database Schema

1. Overview

The tenant onboarding module manages registration, configuration, bot setup, and knowledge ingestion. All data is linked by tenant_id with Row-Level Security (RLS) to isolate tenant data.

tenants

Column	Type	Description
id	UUID (PK)	Unique tenant identifier
name	VARCHAR(255)	Tenant name
domain	VARCHAR(255)	Tenant domain (optional)
plan	VARCHAR(50)	Subscription plan (free, pro, enterprise)
status	ENUM('active','pending','suspended')	Tenant status
created_at	TIMESTAMP	Creation timestamp
updated_at	TIMESTAMP	Last update timestamp
settings	JSONB	Miscellaneous configuration (limits, billing IDs)

tenant_admins

Column	Type	Description
id	UUID (PK)	Unique ID
tenant_id	UUID (FK → tenants.id)	Tenant reference
email	VARCHAR(255)	Admin email
password_hash	TEXT	Hashed password
role	ENUM('owner','admin')	Admin role
verified	BOOLEAN	Email verified flag
last_login	TIMESTAMP	Last login time

agents

Column	Type	Description
id	UUID (PK)	Unique agent ID
tenant_id	UUID (FK → tenants.id)	Tenant reference
name	VARCHAR(255)	Agent name
description	TEXT	Bot persona summary
llm_config	JSONB	Model, temperature, top_p, etc.
retrieval_config	JSONB	Vector DB details, filters, RAG params
guardrails	JSONB	NeMo/PII/moderation rules
branding	JSONB	Logo URL, theme color, font, etc.
created_at	TIMESTAMP	Creation date
updated_at	TIMESTAMP	Last modified

knowledge_sources

Column	Type	Description
id	UUID (PK)	Source ID
tenant_id	UUID (FK → tenants.id)	Tenant reference
agent_id	UUID (FK → agents.id)	Optional (specific bot)
type	ENUM('file','url','integration')	Source type
name	VARCHAR(255)	Display name
source_url	TEXT	Original link or storage path
status	ENUM('pending','processing','indexed','error')	Current state
